Dear Customer,

Micron, Inc.

Micron to Support Legit.Health in Marketing Activities for the Japanese Market
~An AI-Driven Image Assessment Tool for Dermatology (Legit.Health)~

Micron, Inc. (hereafter, Micron, head office: Tokyo) is pleased to announce that Micron will support Legit.Health (head office: Spain)'s marketing activities aimed at developing and expanding its solution also called Legit.Health (an AI-driven image assessment tool for dermatology) in Japan.

Legit.Health is a company that develops medical AI software. Legit.Health is an AI-based diagnosis and measurement support neural network for dermatology, which can be easily connected and expanded from existing systems. In addition, it is also an automatic patient-report outcome measurement (PRO: Patient-reported outcome) tool that allows subjects to report automated measurements of photo data taken with their own smartphones. Legit.Health diagnoses and measures the severity of 232 skin conditions from photos taken with a smartphone. Atopic dermatitis, urticaria, psoriasis, hidradenitis suppurativa, and acne vulgaris can be precisely evaluated and scored (SCORAD, EASI, PASI, IHS4, etc.) without using special hardware for image capture. With the technology of Legit.Health, it is possible to input scoring automatically in a short time with little variation.

In addition, this product can be used not only for traditional clinical trials, but also for decentralized clinical trials (DCT) and real-world evidence (RWE), as skin photographs can be reported via the internet. This product has obtained CE marking and is in the process of FDA medical device certification application. Furthermore, it has already been verified and used in more than 6 countries.

Micron will support Legit.Health marketing activities aim at developing and expanding Legit.Health in Japan.

- Introduction to pharmaceutical companies, etc.
- Support for joint development with pharmaceutical companies, etc.
- Introduction to medical institutions
- Research support with medical institutions

Since its establishment, Micron has been contributing to healthcare by approaching medical imaging from both the diagnostic and therapeutic perspectives. The new project “INDICATE” (INnovative Diagnostic Imaging Capabilities Adoption To End -users delivers innovative imaging technology to your doorstep) was launched with the theme of “Bridging the gap between SaMD and diagnostic technologies”. In this project, we are introducing and proposing image analysis technologies that incorporate AI and other advanced technologies. We will be a bridge between domestic and foreign companies that want to introduce SaMD in Japan, and pharmaceutical companies and medical device companies that are interested in advanced technologies. We will continue to contribute to the development of digital healthcare technologies related to medical imaging.

Legit.Health Company Information

President	Andy Aguilar
Head Office	BAT Tower, 14th floor, Bilbao (Biscay) Spain
Established	February 11, 2020
Business Contents	<ul style="list-style-type: none">· Provides photography services for clinical trials that use pioneering artificial intelligence.· Integrates with CROs to provide more reliable clinical endpoints extracted automatically from images.· Manufacturer of a CE-marked medical device that is deployed in hospitals and insurers, empowering nurses and GPs to perform at the specialists' level.
